13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplete horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

BOPCO, LP respectfully submits this sundry notice of intent to construct/re-route above ground flowlines. The existing flowlines carrying oil, gas and water from the Poker Lake Unit CVX JV PC 19H & 20H wells to the battery located on the PLU CVX JV PC 10H in NWNE, Sec 20, 24S-30E. The 19H & 20H are on a shared pad.

From the 19H/20H location, two 3-1/2" threaded steel lines will follow existing surface disturbances south to the existing (buried) Poker Lake Unit SWD line. The lines will continue on the surface along existing disturbances for approximately 1.22 miles to an existing Enterprise buried pipeline and ROW. The lines will then turn North and follow the pipeline route for approximately .24 miles to the 10H location. At that point, the lines will follow the location perimeter to their respective tanks.

14. I hereby certify that the foregoing is true and correct.

Additional data for EC transaction #334630 that would not fit on the form

32. Additional remarks, continued

The route currently used is marked in yellow on the attached map. The revised route is marked in red. The new route would cut the flowline length in half, allowing for reduced operating pressures at the well and decrease the potential for leaks.
